A must read! The author has explained in easy to understand terms why conventional cancer treatments don't work. In addition, the author discusses why we are told natural healing remedies are ineffective, when they are not. I'm really glad more books on this subject are being published after researching the topic. Two big thumbs up for this book and to this author!

This book offers a lot of interesting viewpoints on the subject of cancer, treating cancer and preventing cancer from spreading. The book is miss-titled, as most of these entries are really prevention measures as opposed to cures. Following the advice of the author may be a way to slow the spread of cancer that exists already, or it may be a way to prevent the disease from forming in the first place. The author also shares his viewpoint on the media and the way that various media outlets portray cancer to the general public. The opinion is also offered as to why there is little to no funding for these natural cures. I will let readers decide what they will about the opinions of the author. I agree with a lot of the viewpoints, and disagree with others. All in all, it was a stimulating read on a very serious topic.

This is an interesting book about treating cancer with natural alternatives to chemotherapy. I love reading books about natural medicine, so I was curious to check this one out. The book is short and sweet, yet jam-packed with info about homeopathic remedies for the symptoms of cancer. I would recommend this book to anyone who has cancer or knows someone who does. Natural medicine is often overlooked as a treatment alternative, and I think it is important to be informed about all possible options before choosing a treatment regimen. Highly recommended!

I have several people in my life and family who have suffered from cancer. Seeing what they have gone through, I find myself eager to learn anything I can to prevent getting cancer myself and, God forbid one day I receive the bad news, how to cure it. This book, as well as its companion Cancer Prevention, are a great first read for those looking to follow a natural path to cancer free health.

this book was very one-sided and extremely biased. I do believe in any natural cure for cancer but I am currently being CURED by chemotherapy which is working for me. Chemotherapy does kill off healthy cells that is true but new cells grow back to take their place.
