Customer Reviews

Price \$1.99, and in this case don't think that you will get more than you pay for. About 18 short pages of actual fabricationinfo. with a few nuggets of valuable details. If you are fabricating already you will want more specific information, if you are just getting started you will need a lot more.

Let me just start by saying the chopper "craze" is dead. only the true fans remain. sadly remnants of quick buck artists are still floating around the net...and this is a case in point.building a chopper frame is SERIOUS TECHNICAL WORK. get it wrong and you die (or get seriously hurt)... simple as that. there is SO MUCH MORE to building a frame than hacking a few tubes together and dropping in a motor etc.I would suggest for anyone SERIOUSLY interested in this topic to check out industry leaders in the field and draw from their advice. the good ones will be happy to help. Look up books by DHC or RedBarronchoppers.Com they supply tons of free info to newbies and the site is quite addictivelet me restate this one more time: DO NOT RISK YOUR LIFE following cheap ebook advice.
